

Science

Human Body

sight	Your eyes let you see all the things around you.
hearing	Your ears let you listen to all the things around you. Your brain is able to tell what different sounds are.
touch	Your skin gives you the sense of touch. You can tell if something is warm, cold, smooth or rough without even looking at it!
taste	Your sense of taste comes from your tongue. You can tell if something tastes bitter or sweet. You might have some tastes you like and some you don't.
smell	You smell using your nose. Your nose can tell if things smell nice or not nice.

It may be useful to use your knowledge of:

- Dinosaurs – herbivores, carnivores and omnivores/habitats, labelling body parts.
- SRE – Caring for our body and hygiene.
- PE/Science – Prior discussion about body parts and sense

By the end of this unit you will...

- Label body parts.
- Say what sense is related to the body part.
- Discuss hygiene and brushing our teeth.

This will help you with your future learning when you will learn about....

- The human body (including food, nutrition, skeletons, digestion, teeth and muscles) in Pine Class.
- Living things in Oak Class.

Senses

Parts of the Body
